trvlrs

A project brought to you by team JAG (Joel Andy Glen)

APPLICATION OVERVIEW

Have you ever planned a trip with friends? While fun, it can be very difficult and time consuming to coordinate events with all parties, create an itinerary, and split costs.

trvlrs is a web application that aims to remove the unnecessary difficulty of group travel planning by providing a platform to perform all of these crucial tasks in one convenient place. You and your travel party shouldn't be stressing about your trip – instead with **trvlrs** you can pick your events, vote on and discuss them, setup your itinerary, and even figure out how much each person owes prior to beginning your journey.

APPLICATION WIREFRAMES (PLEASE CLICK [HERE](#))

GROUP DIVISION OF LABOR

Joel – All front-end design

Andy – Back-end, Database structures, keeper of Git

Glen – Back-end, APIs, tying code together

ROUGH SCHEDULE OF TASKS

July 2 – Completion of Wires

July 6 – Database framework in place

July 6 – Initial API calls populating (may or may not be hitting page at this stage), but working

July 8 – Working MVP – where user can sign in, create a trip, create a basic itinerary – maybe add an event (this last piece may be a bit aggressive)

July 11 – Working API calls and population / Selection of items to add to itinerary

July 13 – Working Voting system

July 15 – Assess Direction / Decision of what features can and can't make the final product

July 18 – Buttoning up Functionality

July 18 – Finishing touches of Front-End / Prep for presentation

July 18 – Present

CURRENT PROJECT MANAGEMENT BOARD

The screenshot shows a Trello board titled "Travel_Go". The board has three columns: "Doing", "Done", and "Add a list...". The "Doing" column contains cards for "Splash Page", "Display Image, Business, Rating based on Search", "Wireframe", "Invite users", and "Connect users to trips there invited too". The "Done" column contains a card for "API | Search By location | return data from Yelp api". The "Add a list..." column has a placeholder "Add a card...". On the right side of the board, there is a large, scenic image of a lake surrounded by mountains. The Trello interface includes a header with various project links and a menu on the right with options like "Change Background", "Filter Cards", and "Activity". The activity feed shows recent actions taken by a user named Andy Em.

Column	Card Details
Doing	Splash Page, Display Image, Business, Rating based on Search, Wireframe, Invite users, Connect users to trips there invited too
Done	API Search By location return data from Yelp api
Add a list...	Add a card...
